

Branding Audit — client Branch

Date: March 16, 2026 **Branch:** client (compared against docker-refactor) **Status:** Read-only review — no changes made

Executive Summary

The client branch made **significant progress** cleaning up Deloitte references. However, a number of old product name instances remain, primarily around the `cfg-ai` URL subpath, `cfg_ai` database names, `<AppName />` component usage, image/file naming, and isolated text references.

Category	docker-refactor	client branch	Status
Deloitte text mentions	~46	0	✅ FIXED
@deloitte.com email addresses	~20	0	✅ FIXED
github.com/Deloitte-Default repos	~20	0	✅ FIXED
workshop.cfg.deloitte.com URLs	~75	0	✅ FIXED (→ semoss.com)
docker.cfg.deloitte.com URLs	3	0	✅ FIXED
prod.eu.aicore.deloitte.com	2	1 (→ aicore.com)	✅ Domain fixed
<AppName /> component	~754	~390	⚠️ PARTIAL — still present
cfg-ai URL subpaths	~50	~44	⚠️ REMAINS
cfg_ai database names	~30	~30	⚠️ REMAINS
AI Core text	~330	~330	⚠️ REMAINS (mostly sidebar/API paths)
CFG text references	~315	~10	⚠️ PARTIAL — some remain
GovConnect	6	2	⚠️ PARTIAL — video filename
CortexAI	2	2	📘 Style Guide only (expected)

✅ Section 1: Issues FIXED on client branch

1.1 Deloitte Company Name & Domain — Fully Removed

All Deloitte text references, @deloitte.com emails, and deloitte.com URLs have been removed.

Replacements made:

- SEM0SS@deloitte.com → SEM0SS@semoss.com

- globalaicareplatform@deloitte.com → globalaicareplatform@semoss.com
- CFGAI@deloitte.com → removed/updated
- pbimalshah@deloitte.com et al. → @semoss.com equivalents
- workshop.cfg.deloitte.com → workshop.cfg.semoss.com
- docker.cfg.deloitte.com → fixed
- prod.eu.aicore.deloitte.com → prod.eu.aicore.com
- github.com/Deloitte-Default/* → removed/replaced

1.2 Most CFG Text References — Fixed

The large majority of "CFG" brand references in body text and headings have been removed.

⚠ Section 2: Issues REMAINING on client branch

2.1 <AppName /> React/MDX Component (~390 instances in current docs)

The <AppName /> component is used throughout the docs as a dynamic product name placeholder. It is **still present** in approximately 390 locations in docusaurus/docs/ alone, plus mirrors in versioned docs.

Verify: Should <AppName /> render as "SEMOSS"? If the component definition at docusaurus/src/components/CustomFields.tsx is already set to "SEMOSS", these may be fine. If not, the component or all instances need updating.

Highest-concentration files (current docs):

File	Approx. Count
docusaurus/docs/Advanced Installation/Mac Developer Install.md	28
docusaurus/docs/Advanced Installation/Docker BE Install Guide.md	20
docusaurus/docs/Advanced Installation/Frontend Installation.md	14
docusaurus/docs/Getting Started/How to Access SEMOSS.md	14
docusaurus/docs/Platform Navigation/Playground.md	14
docusaurus/docs/Cookbook Recipes/RegressionTestingUsingToPDF.md	13
docusaurus/docs/Cookbook Recipes/Policy Bot.md	12
docusaurus/docs/Cookbook Recipes/Streamlit App Quickstart Guide.md	11
docusaurus/docs/Platform Navigation/Systems App.md	15
docusaurus/docs/Integrating with SEMOSS/Packages and Pre-requisites.md	15

2.2 cfg-ai URL Subpath (~44 files)

The domain was updated from deloitte.com → semoss.com, but the **URL path segment /cfg-ai-demo/ and /cfg-ai-dev/** was not changed.

Examples:

- `https://workshop.cfg.semoss.com/cfg-ai-demo/SemossWeb/...`
- `https://workshop.cfg.semoss.com/cfg-ai-dev/Monolith/api/engine/runPixel`
- `ENDPOINT="https://workshop.cfg.semoss.com/cfg-ai-demo"`
- `base="https://workshop.cfg.semoss.com/cfg-ai-demo/cfg-ai-demo/Monolith/api"`

Note: `/cfg-ai-demo` may be an actual server deployment path that cannot be renamed without a server-side change. Verify with the infrastructure team whether this path can be changed or should remain as-is.

Files affected (current docs):

File	Lines	Type
docusaurus/docs/Getting Started/How to Access SEMOSS.mdx	11, 13, 16	URL with <code>/cfg-ai-demo/</code>
docusaurus/docs/Platform Navigation/Settings/My Profile.mdx	33, 34, 49	ENDPOINT variable + base URL
docusaurus/docs/Platform Navigation/Systems App.mdx	21	URL in link
docusaurus/docs/Platform Navigation/App Library.mdx	83	Embedded iframe src
docusaurus/docs/Advanced Installation/Deploying a Private Server/AI Server Configuration Parameters.md	69, 283, 295, 357, 360–365	Config examples + subpath values
docusaurus/docs/Advanced Installation/Deploying a Private Server/Sandbox Deployment.md	—	Deployment config
docusaurus/docs/Advanced Installation/Deploying a Private Server/High Availability Deployment.md	—	Deployment config
docusaurus/docs/Advanced Installation/Docker BE Install Guide.md	—	Setup instructions
docusaurus/docs/Building Apps/Pro Code Apps.md	270	Embedded iframe src
docusaurus/docs/Cookbook Recipes/Guide for Building a JavaScript App (Node.js).md	—	Dev proxy config
docusaurus/docs/Cookbook Recipes/VanillaJS App Quickstart Guide.md	103	Navigation URL
docusaurus/docs/Integrating with SEMOSS/Packages and Pre-requisites.md	—	Docs reference
packages/docusaurus-plugin-reactor-docgen/example-helpjson.mdx	31, 40, 60, 79	API examples
packages/docusaurus-plugin-reactor-docgen/example-reactor-with-params.mdx	39, 48, 68, 87, 202, 216	API examples
packages/docusaurus-plugin-reactor-docgen/readme.md	143	Example curl

docusaurus/reactors/reactorLLMSpec.json	105	API spec URL
docusaurus/reactors/reactorPixel0AS.json	105	API spec URL

Plus mirrors in `versioned_docs/version-4.3.2/` and `versioned_docs/version-5.0.0/`

Note on `workshop.cfg.semoss.com` : The domain now contains `cfg` as a subdomain. This may be intentional (new SEMOSS infrastructure domain) but worth confirming whether this domain name itself needs to change.

2.3 `cfg_ai` Database Identifiers

These appear in configuration parameter examples as actual database names. Unchanged from docker-refactor branch.

Identifier	File	Lines
<code>cfg_ai_sec</code>	AI Server Configuration Parameters.md	58, 61, 117, 129
<code>cfg_ai_lm</code>	AI Server Configuration Parameters.md	140, 152
<code>cfg_ai_sched</code>	AI Server Configuration Parameters.md	163, 175
<code>cfg_ai_user</code>	AI Server Configuration Parameters.md	186, 198
<code>cfg_ai_model_logs</code>	AI Server Configuration Parameters.md	209, 226

Same instances appear in `versioned_docs/version-4.3.2/` and `version-5.0.0/`

⚠ Note: These are likely **actual database names on the server**. Do NOT change in docs without first renaming the databases in the backend.

2.4 `ai-core-api` Directory & Sidebar Navigation

The auto-generated API reference documentation lives under a folder path named `ai-core-api`. This creates thousands of internal references to the old "AI Core" name.

Affected:

- `docusaurus/docs/developer/ai-core-api/` — hundreds of `.api.mdx` files
- `docusaurus/docs/developer/ai-core-api/sidebar.ts`
- `docusaurus/versioned_docs/version-4.3.2/ai-core-api/sidebar.ts`
- `docusaurus/versioned_docs/version-5.0.0/developer/ai-core-api/sidebar.ts`
- `docusaurus/versioned_sidebars/version-4.3.2-sidebars.json` (320 hits)
- `docusaurus/versioned_sidebars/version-5.0.0-sidebars.json` (317 hits)
- `DocVersioning_Release_Checklist.md` — `outputDir: "docs/developer/ai-core-api"` (lines 87, 96, 104)

⚠ Decision required: Renaming this directory and all sidebar references would require updating the API doc generation pipeline. Discuss with dev team before making changes.

2.5 CFG Text References in Body Content

A small number of "CFG" brand name references remain in prose/body text (not in paths or configs).

File	Line	Content
docusaurus/docs/Cookbook Recipes/Guide for Building a JavaScript App (Node.js).md	50	HTML comment: "CFGai-apps repo", "within CFG"
docusaurus/docs/Cookbook Recipes/Guide for Building a JavaScript App (Node.js).md	257	Section heading: "## Updating your App In CFG"
docusaurus/docs/Cookbook Recipes/Guide for Building a JavaScript App (Node.js).md	259	Body text: "update your app in CFG"
docusaurus/docs/Building Apps/Add Custom Reactors to Apps/Run Pixels.md	25	UI label reference: "CFG Terminal"
docusaurus/docs/Building Apps/Add Custom Reactors to Apps/Run Pixels.md	44	Body text: "deploy your app to CFG"
docusaurus/docs/Integrating with SEMOSS/OpenAI Endpoints with Python.md	86	Code comment: "use CFG's API"

Mirrors of these exist in `versioned_docs/version-4.3.2/` and `version-5.0.0/` for the applicable files.

2.6 File & Document Names Containing Old Branding

These are actual file/folder names (not just content) that contain old branding. Renaming them requires updating all references to those paths.

Document files:

File Path	Issue
docusaurus/docs/Integrating with SEMOSS/Connecting to CFG AI.md	Filename contains "CFG AI"
docusaurus/versioned_docs/version-5.0.0/Integrating with SEMOSS/Connecting to CFG AI.md	Same
docusaurus/versioned_docs/version-4.3.2/Integrating with SEMOSS/Connecting to CFG AI.md	Same
streamlit/CFG_Chatbot.py	Filename contains "CFG"
docusaurus/docs/Building Apps/Troubleshooting/DebugAICorePython.md	Filename contains "AICore"
docusaurus/versioned_docs/version-5.0.0/Building Apps/Troubleshooting/DebugAICorePython.md	Same

"Connecting to CFG AI.md" is also referenced in docs:

- docusaurus/docs/Getting Started/How to Access SEMOSS.mdx line 16 — links to `Connecting%20to%20CFG%20AI.md`

Image files and folders:

Path	Issue
docusaurus/static/img/Navigating/CFG AI Walkthrough/	Folder name
docusaurus/static/img/Navigating/CFG AI Apps/	Folder name
docusaurus/static/img/VectorDatabase/CFGTerminal.png	Filename
docusaurus/static/img/SemossDevInstallation/cfgai-uifolder.png	Filename
docusaurus/static/versioned/5.0.0/img/Navigating/CFG AI Walkthrough/	Versioned copy
docusaurus/static/versioned/5.0.0/img/Navigating/CFG AI Apps/	Versioned copy
docusaurus/static/versioned/5.0.0/img/VectorDatabase/CFGTerminal.png	Versioned copy
docusaurus/static/versioned/5.0.0/img/SemossDevInstallation/cfgai-uifolder.png	Versioned copy
docusaurus/static/versioned/4.3.2/img/...	Same as above (4.3.2 copies)

These image paths are referenced inside markdown files:

- docusaurus/docs/Platform Navigation/Vector Catalog.mdx lines 29, 40, 43, 46, 70 — CFG%20AI%20Walkthrough/...
- docusaurus/docs/Platform Navigation/Systems App.mdx lines 110, 118, 126, 132 — CFG%20AI%20Apps/...
- Various versioned doc mirrors

2.7 GovConnect — Video Filename

File	Line	Content
docusaurus/docs/Getting Started/Overview.mdx	15	url="/Demos/GovConnectaiIntroduction.mp4"
docusaurus/versioned_docs/version-5.0.0/Getting Started/Overview.mdx	15	Same

The video file itself (/Demos/GovConnectaiIntroduction.mp4) also needs to be renamed/replaced, and the static file in the repo or CDN must be updated alongside any doc change.

2.8 Miscellaneous URL / Domain Issues

File	Line	Content	Note
docusaurus/docs/Cookbook Recipes/Code Modifier.mdx	29	https://prod.eu.aicore.com/...	"aicore" in domain — verify if this is correct new domain
docusaurus/docs/Getting Started/How to Access SEMOSS.mdx	16	Link text: "Connecting to CFG AI"	Points to the old-named file

docusaurus/docs/Integrating with SEMOSS/Packages and Pre-requisites.md	191	globalaicoreplatform@semoss.com	Email updated but "aicoreplatform" in name — verify
--	-----	---------------------------------	---

2.9 CortexAI — Internal Style Guide (Expected)

File	Lines	Context
Internal Style Guide.md	3, 11	Explicitly documents "CortexAI" as a deprecated term — intentional, no action needed

Summary: What Still Needs Action

High Priority

1. `<AppName /> component` — verify if it renders "SEMOSS"; if not, update component definition or all 390+ instances
2. `cfg-ai URL subpaths` — confirm with infra team if `/cfg-ai-demo/` path can be changed; update docs if so
3. `Connecting to CFG AI.md` — rename file and update the link in `How to Access SEMOSS.mdx`
4. `CFG text in body content` — 6 files with direct "CFG" brand references in prose/headings

Medium Priority

5. `Image folder & file names` — `CFG AI Walkthrough/` , `CFG AI Apps/` , `CFGTerminal.png` , `cfgai-uifolder.png`
6. `DebugAICorePython.md` — rename file
7. `streamlit/CFG_Chatbot.py` — rename file
8. `GovConnectaiIntroduction.mp4` — rename video file and update references

Requires Infrastructure / Backend Decision

9. `cfg_ai database names` (`cfg_ai_sec` , `cfg_ai_lm` , etc.) — cannot update docs without backend DB rename
10. `ai-core-api directory` — requires API generation pipeline change; discuss with dev team
11. `workshop.cfg.semass.com domain` — confirm whether `cfg` in subdomain name is acceptable long-term
12. `prod.eu.aicore.com` — confirm if "aicore" in domain is the correct new name or still needs updating
